INTRODUCTION

The 1999 existing land use inventory prepared by the Suffolk County Department of Planning (SCPD) shows in map and numerical formats the result, i.e., integrated history, of past development actions in the five east end towns of Suffolk County (Suffolk County Dept. of Planning 2000a). This characterization is important in analyzing future development scenarios. The following two related questions are of special significance to the five east end towns of Suffolk County.

1. How *can* eastern Suffolk County be developed in the future?
2. How *will* eastern Suffolk County be developed in the future?

The answer to question #1 is a function of how the land has been used in the past, what proportion of the land is available for development in the future, and the uses that are allowed on this available land as dictated by existing zoning regulations. The answer to question #2 will depend upon future land use decisions, and the extent to which the rules governing allowable use are modified to achieve some desired end or planning goal.

This report answers question #1. It describes how the study area could be used in the future given the constraints of existing zoning and various assumptions.

The methodology discussed in this report was used to identify, map and quantify the land available for development in eastern Suffolk County at tax map scale, using the 1999 Existing Land Use maps, municipal zoning maps and SCPD GIS coverages of zoning data, farmland preservation data, easement information, etc. **Land available for development is defined in this report as vacant land or land that has not yet been developed to the maximum extent as permitted by municipal zoning law.** Vacant parcels; agriculturally used property with intact development rights; residentially developed property capable of further residential subdivision according to zoning; and a select group of “special case” properties that are not included in any of the above three categories were considered as land available for development.

The methodology used for land available for development assumes that every parcel so designated will be residentially, commercially or industrially developed to the fullest extent according to town or village zoning regulations. In all cases, the projected use of a parcel available for development is determined by the existing zoning classification of that particular parcel. Designating a parcel of land available for development does not connote that the parcel should necessarily be developed. It simply states that under current zoning regulations, that parcel can be developed, or the existing use occurring on the parcel can be intensified. Current zoning serves as a blueprint for the type and intensity of future development one can expect within a municipality, and it is used as a planning tool to assist in the identification, mapping and quantification of the land available for development within the study area.

1999 Land Available for Development - Eastern Suffolk County

Land available for residential, commercial and industrial development in the study area was inventoried. Acreage and the number of tax map parcels were quantified for both commercially and industrially zoned land available for development. The acreage, number of tax parcels, and the potential number of dwelling units were calculated for all residentially zoned available land, and the results are displayed for each residential zoning classification. The land available for development analysis also included consideration of the re-development of a select group of parcels labeled in this report as “special case” properties. The “special case” properties are a collection of large parcels or large areas that meet one or more of criteria listed in the section on methodology.

The results of the land available for development analysis and data from the U. S. Census Bureau on the number of persons per household have been used to calculate saturation population estimates for each municipality, which are reported in a separate study (Suffolk County Dept. of Planning 2000b). Saturation population is the future potential population that would exist when all available land is developed in accord with existing zoning.

METHODOLOGY

The categories of land available for development in this analysis are defined as follows:

Residential

- vacant, residentially zoned, substandard property
- vacant, residentially zoned, non-subdividable property
- vacant, residentially zoned, subdividable property
- residentially developed, residentially zoned, subdividable property
- agriculturally used, residentially zoned, subdividable property

Commercial

- vacant, commercially zoned property
- agriculturally used, commercially zoned property

Industrial

- vacant, industrially zoned property
- agriculturally used, industrially zoned property

Special cases

- large, privately owned, recreation or conservation parcels capable of further intensification of development i.e., golf courses, gun and rod clubs, camps
- large, undeveloped, old-filed map areas
- government surplus property, i.e., mental health facilities, military installations
- large, unique parcels i.e., Gardiners Island

The methodology employed to analyze residentially, commercially and industrially zoned land available for development first requires an accurate, parcel-specific GIS tax map base and GIS coverages depicting parcel-specific land use (Suffolk County Dept. of Planning 2000a) and municipal zoning. Each parcel of land shown on the Suffolk County Real Property Tax Map base was assigned one land use classification attribute and one zoning classification attribute. When a single parcel is covered by two or more zoning districts, the primary zoning classification was determined and assigned to that parcel. This is the same process that was used when multiple land uses occurred on individual parcels, i.e., the principal use was assigned to the parcel in the existing land use inventory.

The land available for development was derived from queries of the GIS data base relating to land use, zoning, and parcel size. As a result of the queries, data records listing residentially, commercially, and industrially zoned land available for development were sorted and tabulated in Lotus spreadsheet files by municipal jurisdiction, zoning classification and parcel size for each of the following categories:

- vacant, residentially zoned, substandard property where the lot is a least 6,000

square feet in size, but less than the minimum lot size as required by existing zoning.

- vacant, residentially zoned, non-subdividable property where the lot size conforms to zoning requirements, but is less than twice the minimum lot size as required by existing zoning.
- vacant, residentially zoned, subdividable property where the lot size is greater than or equal to twice the minimum lot size as required by existing zoning.
- residentially used, residentially zoned, subdividable property where the lot size is greater than or equal to twice the minimum lot size as required by existing zoning.
- agriculturally used, residentially zoned, subdividable property (includes only parcels with development rights intact). (Note: land in State Agricultural Districts is considered available for development, since the development status of such land can change.)
- vacant, commercially zoned property.
- agriculturally used, commercially zoned property (includes only parcels with development rights intact).
- vacant, industrially zoned property.
- agriculturally used, industrially zoned property (includes only parcels with development rights intact).

The query statements that were applied to the GIS data to obtain land available for development by municipality are shown in Appendix I. These statements reflect the complexity of the land available for development methodology.

The number of parcels and acreage that fell into the above categories were quantified for each residential zoning classification within a municipality, and the results were then used to calculate the potential number of dwelling units that could be created from land available for development. The potential number of dwelling units within the vacant, residentially zoned, non-subdividable property categories is equal to the number of tax map parcels in the subject categories. A residentially zoned tax map parcel classified as vacant, residentially used or agriculturally used was considered subdividable and available for development if it was greater than or equal to twice the minimum lot size as required by existing zoning. Agriculturally used parcels with severed development rights owned by Suffolk County or town governments, farmland held in private conservation land trusts, and subdivision reserves for agricultural use owned by property owners associations were manually deleted from the GIS generated list of parcels available for development. However, land in State Agricultural Districts is considered available for development, since the development status of such land can change.

The potential number of dwelling units that could be accommodated on land available for development in the three residentially zoned, subdividable property categories (vacant, residentially used and agriculturally used) is calculated by multiplying the number of acres available for development by a dwelling unit yield per acre factor for each zoning classification. The dwelling unit yield factor was applied to the sum of the acreage available for development

1999 Land Available for Development - Eastern Suffolk County

within the residentially zoned, subdividable property categories (vacant, residentially used, and agriculturally used) for each zoning classification rather than to each parcel individually. It should be noted that the potential number of dwelling units that could be accommodated on land available for development in the residentially used, residentially zoned, subdividable property category was reduced by the number of residentially used, residentially zoned, subdividable tax map parcels within each zoning classification in order to take account of the existing development. The dwelling unit yield factors used to determine potential dwelling units are shown in Table 1 (Long Island Regional Planning Board 1978). The yield per acre factors for various zoning lot sizes in Table 1 represent average values associated with conventionally designed subdivision plats.

Table 1. Estimated Number of Dwelling Units Based on Existing Zoning

Zoning Lot Size (Sq. Ft.)	Lots Per Acre	Zoning Lot Size (Sq. Ft.)	Lots Per Acre	Zoning Lot Size (Sq. Ft.)	Lots Per Acre	Zoning Lot Size (Sq. Ft.)	Lots Per Acre	Zoning Lot Size (Sq. Ft.)	Lots Per Acre	Zoning Lot Size (Sq. Ft.)	Lots Per Acre
4,000	6.8	8,000	3.4	12,500	2.4	16,500	1.8	22,000	1.4	2 Acres	0.4
5,000	5.4	8,500	3.3	13,000	2.3	18,000	1.7	25,000	1.3	3 Acres	0.27
6,000	4.5	9,000	3.1	14,000	2.1	18,500	1.6	30,000	1.0	4 Acres	0.20
6,500	4.1	10,000	2.7	14,500	2.0	20,000	1.6	40,000	0.8	5 Acres	0.16
7,000	3.8	11,390	2.6	15,000	2.0	20,500	1.5	43,560	0.7		
7,500	3.6	12,000	2.5	16,000	1.9	21,780	1.5	60,000	0.6

The calculation of the potential number of dwelling units from land available for development using the above methodology was further refined for the following reasons:

- # Through sanitary code regulation, the Suffolk County Dept. of Health Services (SCDHS) requires that a building lot proposed for residential development in an area served by public water contain a minimum lot size of 6,000 square feet for the issuance of a permit to construct an on-site subsurface sewage disposal system. Therefore, since most of the study area is not sewered and the SCDHS will not usually issue permits for new residential construction on lots that are less than 6,000 square feet, vacant lots of less than 6,000 square feet were not included in the land available for development analysis.
- # Portions of the study area in the Towns of Riverhead and Southampton lie within the boundaries of the Core Preservation Area of the Central Pine Barrens. Utilizing the policies and guidelines of the Central Pine Barrens Comprehensive Land Use Plan, it was decided that residentially developed parcels of any size located in the Core would not be considered available for additional subdivision activity (Central Pine Barrens Joint Planning and Policy Commission 1996). Vacant, residentially zoned parcels of any size located in the Core were classified as vacant, non-subdividable lots available for development because the owner of a large vacant parcel has the right to build one

1999 Land Available for Development - Eastern Suffolk County

residential dwelling unit on site. Parcels located in the Core with recorded Central Pine Barrens conservation easements¹ (parcels with severed development rights) were not included in the land available for development inventory.

- # The number of vacant lots remaining in partially developed subdivisions and old-filed map areas was counted in the land available for development analysis. It is highly unlikely that fully undeveloped old-filed map areas will ever be built as currently platted. Therefore, dwelling unit yield calculations for a fully undeveloped old-filed map area were based on minimum lot size as required by existing zoning for the old-filed map area as a whole. Fully undeveloped old-filed map areas were classified as “special cases.”

The number of potential dwelling units derived from the land available for development analysis should be interpreted as a maximum figure based on existing zoning. A site plan analysis of each parcel inventoried as available for development was not within the scope of this study. The land available for development analysis may overstate the actual number of potential dwelling units for the following reasons:

- # No attempt was made in the land available for development analysis to predict how dwelling unit yields could/would be reduced by natural resource characteristics (underwater lands, beaches, wetlands, dunes, bluffs, steep slopes, etc.) on a parcel-specific basis.
- # Only zoning regulations concerning permitted uses and required minimum lot size were considered in the land available for development analysis. The shape of the parcel was not considered in the suitability of the parcel for development. Parcels that meet the minimum lot size requirements may not necessarily meet setback requirements contained in local zoning ordinances.
- # The physical location of an existing house on a residentially developed, subdividable parcel was not considered in the land available for development analysis. A second residential structure would probably not meet zoning setback requirements if a house was already situated in the center of a parcel that was twice the minimum lot size required by zoning.

¹A Pine Barrens Credit (PBC) Certificate is a document issued on behalf of the Central Pine Barrens Joint Planning and Policy Commission which indicates the number of PBCs to which the owner of a particular parcel of land is entitled and which attests to the fact that the development rights of a particular parcel of land in a sending district of the Central Pine Barrens have been severed from the land by the recording of a conservation easement, and that these rights are available for sale or use (Central Pine Barrens Joint Planning and Policy Commission 1996). A PBC shall be allocated for each single family dwelling permitted on a residentially zoned parcel of land located within the Core Preservation Area based upon development yields similar to that listed in Table 1.

1999 Land Available for Development - Eastern Suffolk County

- # Any vacant or residentially used subdividable parcel may be prohibited from further subdivision and development through the existence of permanent easements unbeknownst to SCPD.

Quantification of commercially and industrially zoned land available for development was less complex than residentially zoned land available for development. The acreage and number of parcels of all commercially and industrially zoned land available for development (either currently vacant or agriculturally used) were aggregated by municipal jurisdiction. No attempt was made to determine the yield on available commercially and industrially zoned property. Although current zoning may permit further intensification of development on parcels already designated as commercially or industrially used, the land available for development analysis did not address the potential maximization of development according to zoning on existing commercially or industrially used property. Also, non-conforming residentially developed property situated on commercially or industrially zoned land was not considered for more intensive development in the land available for development analysis.

The inventory of land available for development was adjusted as necessary by an evaluation of special cases. The special case category includes:

- large, privately owned recreation and open space parcels not protected by development restrictions, permanent easements, etc. (Note: land subject to non-permanent easements is considered available for development, since the development status of such land can change.)
- large, non-residentially developed properties, some not in conformance with existing zoning, that have likely re-development potential (e.g., Calverton Airport, Bridgehampton Raceway, active sand mines).
- large, vacant old-filed subdivision mapped areas.

The conduct of this analysis for each of the five towns and nine villages in the study area required the judicious use of the Planning Department's GIS data bases on existing land use and municipal zoning. Numerous interim work maps were plotted, analyzed and subjected to manual adjustment, especially where data bases needed for some specific aspect of the work were not readily available or in a computerized format tied to the Suffolk County Real Property Tax Map. GIS queries were structured by the characteristics used to define the various categories of land available for development. The end result - the Land Available for Development Map Series and numeric tabulations - is the product of both GIS and manual manipulations.

RESULTS OF THE LAND AVAILABLE FOR DEVELOPMENT ANALYSIS

The results of the land available for development analysis are displayed in map and numerical formats. The full color, computer generated Land Available for Development Map Series that accompanies this report consists of a parcel-specific base map depicting the distribution of residentially, commercially and industrially zoned land available for development for each of the five east end towns. The numeric results of the analysis are discussed below.

The land area of the five east end towns encompasses approximately 221,000 acres on over 111,000 real property parcels. Table 2 illustrates the total amount of land available for development (residentially, commercially and industrially zoned) in contrast to the total upland acreage in the study area. **Nearly 83,000 acres (37%) of the upland acreage in eastern Suffolk County are still available for development.** In terms of acreage, residentially zoned land accounts for 90% of land available for development. Commercially and industrially zoned properties comprise 1% and 9%, respectively, of the acreage available for development.

Table 2. Upland Acreage Available for Development in Eastern Suffolk County - 1999

Municipality*	Riverhead	Southold	Shelter Island	South-ampton	East Hampton	Total
Town-wide Upland Acreage	43,297	34,767	7,247	88,963	46,996	221,270
Town-wide Upland Acreage Available for Development	22,267	15,105	2,647	27,895	14,871	82,785
% of Town-wide Upland Acreage Available for Development	51%	43%	37%	31%	32%	37%

*Town totals also include incorporated villages.

Table 3 depicts the number of acres, tax map parcels, and potential dwelling units by town (inclusive of villages) in residentially zoned land available for development categories. **Development of the residentially zoned available land under current zoning conditions (74,108 acres) has the potential for the creation of over 48,000 new dwelling units.**

1999 Land Available for Development - Eastern Suffolk County

Table 3. Residentially Zoned Land Available for Development in Eastern Suffolk County - 1999

Municipality*	Type of Developable Property	Acres	Tax Map Parcels	Potential Dwelling Units

Eastern Suffolk	Grand Total	74,108	23,353	48,142

*Town totals also include incorporated villages.

1999 Land Available for Development - Eastern Suffolk County

Table 4 shows that in 1990 nearly 77,000 dwelling units existed in eastern Suffolk County. Maximization of residential development according to existing zoning could result in a total of almost 125,000 dwelling units in eastern Suffolk County - a 63% increase in the number of dwelling units that existed in 1990. (Table 4 shows the 1990 figures in terms of housing units based on U. S. Census Bureau data. The terms dwelling unit and housing unit are used interchangeably in this report.) The Town of Riverhead has the potential for the greatest percent change in dwelling units - well over twice the number of dwelling units that existed in 1990. The Town of Southampton has the potential for adding the greatest number of dwelling units - over 15,000 additional units.

Table 4. Potential Additional Dwelling Units in Eastern Suffolk County at Saturation

Municipality*	1990 Housing Units**	Potential Additional Dwelling Units at Saturation	Percentage Change in Dwelling Units from 1990 to Saturation
Riverhead	10,801	14,139	131%
Southold	12,979	8,438	65%
Shelter Island	2,148	1,862	87%
Southampton	33,795	15,389	46%
East Hampton	17,068	8,314	49%
Total	76,791	48,142	63%

Source: *PEP Population Analysis*, Table 5, p. 10.

* Town totals also include incorporated villages.

**A housing unit is equivalent to a dwelling unit.

The number of acres and tax map parcels classified as commercially or industrially zoned land available for development by municipality is shown in Tables 5 and 6, respectively.

Commercially and industrially zoned land available for development - 1,146 acres and 7,531 acres, respectively - represent 10% percent of the total land available for development in eastern Suffolk County. Approximately 50% of the commercially zoned land available for development and nearly 85% of the industrially zoned land available for development within the study area is located in the Town of Riverhead. Even if the acreage contained within the fence line of the Calverton Airport (2,913 acres under the “Special Cases” category) is subtracted from the total amount of industrially zoned available land, the Town of Riverhead still comprises approximately 73% of all industrially zoned land available for development within the study area.

1999 Land Available for Development - Eastern Suffolk County

Table 5. Commercially Zoned Land Available for Development in Eastern Suffolk County - 1999

Municipality*	Vacant Property		Agricultural Property		Special Cases		Total

APPENDIX

List of Appendices

- Appendix I. Land Available for Development Queries by Municipality
- Appendix II. Land Available for Development by Municipality

APPENDIX I

This appendix contains tables of query statements that were applied to the Suffolk County Department of Planning GIS data files to obtain information on land available for development by municipality. There are four separate query tables for each of the five towns and nine villages comprising eastern Suffolk County. Land available for development was derived from queries of the GIS data base relating to land use, zoning, and parcel size as shown in columns 3, 4 and 5 of all the tables in this appendix. As a result the queries, data records were produced listing individual parcels available for development along with their corresponding acreage size and zoning classification. The queries contained in the tables were designed to produce records of information on land available for development according to the following categories:

- vacant, residentially zoned, non-subdividable property*
- vacant, residentially zoned, subdividable property
- residentially used, residentially zoned, subdividable property
- agriculturally used, residentially zoned, subdividable property
- vacant, commercially zoned property
- agriculturally used, commercially zoned property
- vacant, industrially zoned property
- agriculturally used, industrially zoned property

(Note: in the following appendix tables, the letters “na” indicate that a query was not applicable for a particular zoning classification within one or more of the above land available for development categories.)

*The vacant, residentially zoned, non-subdividable property classification was subsequently divided into the following two classifications:

- vacant, residentially zoned, substandard property - individual lots at least 6,000 square feet in size but less than the minimum required by zoning
- vacant, residentially zoned, non-subdividable property - individual lots range in size from that required by zoning up to twice the minimum required by zoning

APPENDIX II

This appendix contains the results of the land available for development analysis. The number of acres and tax map parcels available for development (residential, commercial and industrial) by municipal zoning category, as well as projections of the potential number of housing units at full development, are displayed in this appendix for each of the five towns and nine villages comprising eastern Suffolk County.
